

# USED EQUIPMENT FOR SALE

**Case 580B.**

**Gleaner R-52.**

**MF 4160V baler.**

**JD 7200, 12R, liquid.**

**New Landoll 26' disc in stock.**

**Hardi 1100, 90'.**

## **SUNFLOWER** The 6631 Vertical Tillage Tool

### **VERTICAL TILLAGE TOOLS**

Vertical tillage systems were created to address the varying needs of farmers. No-till or minimum till farmers found new crop varieties were more difficult to manage in terms of residue. For these farmers, a tool was needed to help breakdown residue without being as aggressive as a disc harrow. Other farmers had a different reason for wanting vertical tillage. These farmers had growing concerns over compaction layers caused by other types of tillage in non-ideal situations. What they needed was a tool that could help manage residue, better prepare soils for planting, all while reducing horizontal movement of the soil. Now moving into its second decade, Vertical tillage practices have had the time and opportunity to be observed and improved. The aim of vertical tillage practices is to manage residue, open soil for warming and drying, while minimizing horizontal movement of the soil – a situation that can cause compaction layers to form.

When used correctly, a vertical tillage tool should size residue for more rapid decomposition, pin and incorporate residue for enhanced erosion resistance, and lift soil vertically for partial sizing, soil warming and soil drying while avoiding compaction layers from the lateral movement of soil. To do the job right, a tool must have sharp blades and the ability to lift an adequate amount of soil vertically for incorporation.

## **5035 Three-Section Field Cultivator**

**Heavy Construction, Outstanding Clearance and Superb Flotation**

**WORKING WIDTHS FROM 18'6" TO 36'6"**

The Sunflower 5035 field cultivator's 3x4-inch rectangular tube frame provides the strength today's high-horsepower tractors require, and Sunflower's computer design features optimum shank placement for unmatched clearance. The model 5035 features single-point depth control with rephasing lift cylinders, all covered under our limited three-year warranty. Shanks are available in either spring-tension or S-tine design and offer up to 190 of point load for extra tough conditions. Walking tandems and 9.5L tires provide the flotation farmers require of a field cultivator, and the self-leveling hitch maintains a level frame from front to rear, regardless of operating depth.
