

USED EQUIPMENT FOR SALE

New loader buckets, 72", \$350-\$500.

New demo Sunflower 4710, \$13,000 or best offer.

Gleaner R-50.

Gleaner S77, low hrs., nice.

Gleaner R40, nice cond.

Used Sunflower 6630, 32', VT, low acres, \$40,000.

SUNFLOWER The 6631 Vertical Tillage Tool

VERTICAL TILLAGE TOOLS

Vertical tillage systems were created to address the varying needs of farmers. No-till or minimum till farmers found new crop varieties were more difficult to manage in terms of residue. For these farmers, a tool was needed to help break-down residue without being as aggressive as a disc harrow. Other farmers had a different reason for wanting vertical tillage. These farmers had growing concerns over compaction layers caused by other types of tillage in non-ideal situations. What they needed was a tool that could help manage residue, better prepare soils for planting, all while reducing horizontal movement of the soil. Now moving into its second decade, Vertical tillage practices have had the time and opportunity to be observed and improved. The aim of vertical tillage practices is to manage residue, open soil for warming and drying, while minimizing horizontal movement of the soil – a situation that can cause compaction layers to form.

When used correctly, a vertical tillage tool should size residue for more rapid decomposition, pin and incorporate residue for enhanced erosion resistance, and lift soil vertically for partial sizing, soil warming and soil drying while avoiding compaction layers from the lateral movement of soil. To do the job right, a tool must have sharp blades and the ability to lift an adequate amount of soil vertically for incorporation.

4213 Coulter Chisel

Welcome To One-Pass Soil Management

With coulters spaced every 7-1/2" and shanks on 15" centers, not much gets past the Sunflower Model 4213 Coulter Chisel. Hydraulically adjusted coulters gangs effectively size & cut residue to eliminate plugging and the need for shredding or discing before ripping. The rigid shearbolt or auto-reset shanks, meanwhile, completely fracture hardpans to a depth of 12" to 14", breaking up soil compaction that a wider-spaced shank arrangement would miss. Whether it's used in the fall or the spring, the 4213 is the perfect answer for removing soil compaction, while opening up the surface for improved water intake and reduced erosion.

Sunflower – The Ultimate Answer
4213 SHANK OPTIONS

Rigid Shearbolt
A maximum point load of 1,500 lbs. with a range of points to control residue.

Auto-Reset
A maximum point load of 1,500 lbs. with a vertical trip height of 13"
