

USED EQUIPMENT FOR SALE

New Sunflower 6630-24, \$42,500.

New Sunflower 4412-07, \$37,500.

Gleaner R-50.

White 8531 CF planter, 16/31R.

Case IH DCX 161 discbine.

Used Sunflower 6630, 32', VT, low acres, \$45,000.

SUNFLOWER The 6631 Vertical Tillage Tool

VERTICAL TILLAGE TOOLS

Vertical tillage systems were created to address the varying needs of farmers. No-till or minimum till farmers found new crop varieties were more difficult to manage in terms of residue. For these farmers, a tool was needed to help break-down residue without being as aggressive as a disc harrow. Other farmers had a different reason for wanting vertical tillage. These farmers had growing concerns over compaction layers caused by other types of tillage in non-ideal situations. What they needed was a tool that could help manage residue, better prepare soils for planting, all while reducing horizontal movement of the soil. Now moving into its second decade, Vertical tillage practices have had the time and opportunity to be observed and improved. The aim of vertical tillage practices is to manage residue, open soil for warming and drying, while minimizing horizontal movement of the soil – a situation that can cause compaction layers to form.

When used correctly, a vertical tillage tool should size residue for more rapid decomposition, pin and incorporate residue for enhanced erosion resistance, and lift soil vertically for partial sizing, soil warming and soil drying while avoiding compaction layers from the lateral movement of soil. To do the job right, a tool must have sharp blades and the ability to lift an adequate amount of soil vertically for incorporation.

9180 Series Forward Fold Planter

Money Does Not Grow On Trees. It Grows On Stalks.

Speed, accuracy and efficiency are all key factors within the narrow window of opportunity during planting season. From the moment you enter the field, the 9180 Series is unfolded and in planting mode in a couple of minutes. Once in planting mode, you can cover up to a full 40' (12.2 m) each pass, allowing you to precisely plant hundreds of acres a day. When finished, quickly fold to a narrow 15' (4.6 m) from the convenience of the cab for transport to the next field.

The integral 3"x3" (7.6 cm x 7.6 cm) fertilizer bar provides the ideal platform for mounting a wide selection of optional fertilizer openers. In addition, it enhances structural integrity of the main frame, making the planter the best choice for challenging no-till conditions. The planter accepts conventional, min-till or no-till fertilizer openers that allow you to precisely place starter fertilizer at the selected depth.
