## Work with the TOUGHEST Put to the test by Jerry for 14 years

Two liquid manure spreaders, a screw agitator, two Super Pumps and two trailer pumps pumping 30 to 40 million gallons of manure a year.

"What I like best about my spreader is the options that it has like the hydraulic powered wheel steering and the weight transfer system to lift the front axle of the spreader when returning empty. It helps reduce the hitch "slapping" due to the negative tongue weight with the larger tool bars. I also like the easy maintenance and how easy it pulls which leads to better fuel economy and quicker cycle times."

Jerry Dibbet  
Dibbet Farm and Custom Hauling, Sioux Center, IA
