FARMSTAR LOADOUT STAND

TRENCH PAL

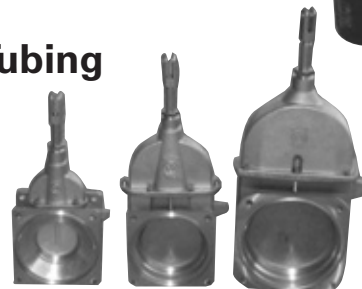

Bazonna
Farmstar Inc.

The Trench Pal adds versatility to your equipment. It is a high-volume pump with the ability to pump thick liquids. Attach the Trench Pal to any hydraulic source providing 13-18 gpm and lower into the product to be pumped out, transferred, or loaded into a tank. There is no need for priming! With its capacity of 750 to 800 GPM jobs are easily done with your pal.

Runs off any auxiliary hydraulics — such as a backhoe, tractor or skid loader. This can be attached to buckets or booms for easy maneuvering and transportation.
