STAINLESS STEEL

The superior choice for all your liquid fertilizer storage needs.

**BUILT TO LAST
CORROSION RESISTANT
ECO-FRIENDLY**

IN STOCK

**THE RUST
STOPS HERE!**

OVER RUST™ is a unique chemical process that stops rust dead in its tracks! It is the only effective way to totally eliminate destructive rust.

OVER RUST eliminates the need for sandblasting, grinding, disassembly, reassembly and the prolonged down-time that is associated with conventional methods of rust treatment.

OVER RUST is easy to use, and its application requires no sophisticated equipment. OVER RUST is applied directly onto the rust. Then, as it cures, it bonds to the metal and forms a tough, black polymer type coating that has actually permeated the rust and etched itself directly into the metal. This finished product is paint-ready and guaranteed to offer you years of trouble-free protection.

PLIA-SYSTEMS

PLIA-DIKE

An attractive and economical alternative to concrete, the popular Plia-Dike is constructed with tough, preform panels. The preformed steel walls are not affected by freezing and thawing temperatures. Plia-Dike's polyethylene and synthetic rubber construction is unaffected by freeze and thaw cycles and provides resistance to many chemicals.

PLIA-LINERS

If you have or are planning to build an earthen or concrete dike, Hunter can custom-fit your system with an XR-5 or Polypropylene liner. Since Hunter liners have up to a 20-year plus weather warranty, this makes your dike virtually maintenance free. They are resistant to tearing and geological instabilities.

drainable tank.

**KNOW YOUR FLOW
on EVERY ROW**

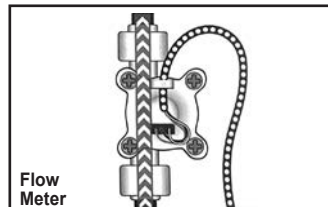

**SIMPLE FLOW MONITORING
THAT WORKS.**

FlowBoards divide pressurized liquid out for each row. FlowBoards are the backbone of OnSite FMS+. They hold the manifolds, flow meters, mounting brackets & modules for the entire system.

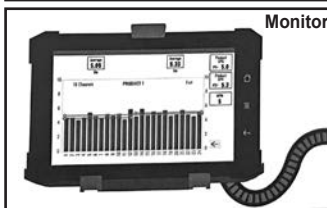

FlowBoard

Flow meters capture real time flow rates on each row. OnSite FMS+ uses electronic flow meters directly after the manifold to get extremely accurate flow rates on each row of your planter.

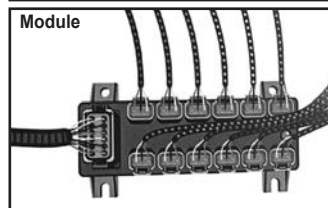

Flow Meter

Monitor

Real-time flow rate data is shown on your screen. The large 7" touchscreen displays each row's performance in an easy-to-read bar graph with target rates and section performance data.

Module

Flow meter data is processed by the OnSite FMS+ Module. OnSite FMS+ Module takes in flow rate data from each row, processes it and sends an aggregated signal to the OnSite FMS+ monitor.

Chandler Equipment Co. **Fertilizer and Lime Spreaders**

Chandler PTO drive
fertilizer
spreader,
6-ton &
8-ton,
8" chain.

spreader.

DURA-ABS™ DI

*Automated
Direct Injection*

The **Dura Auto-Batch System DI** (Automated Direct Injection) works by direct injecting herbicides into the carrier flow while filling the sprayer.

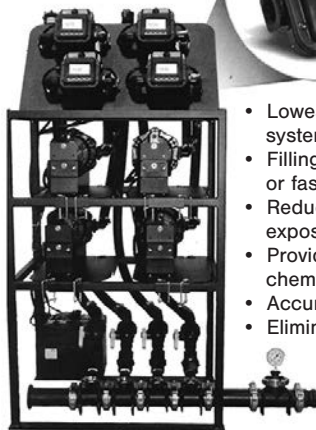

**A Cost
Effective Solution to
Automation**

Increase
PROFITABILITY
with a Dura-ABS DI
Direct Injection

How it Works

1. Select the volume desired
2. Press START
3. The pump will begin to inject fluid then automatically shut off upon completion

- Lowest cost automated sprayer filling system
- Filling your sprayer has never been easier or faster
- Reduces operator error and herbicide exposure
- Provides recirculation, maximizing chemical performance
- Accurately dispenses repeatable batches
- Eliminates cross contamination
